intrahost variant (one position in one animal) all positions (error floor) furin cleavage site

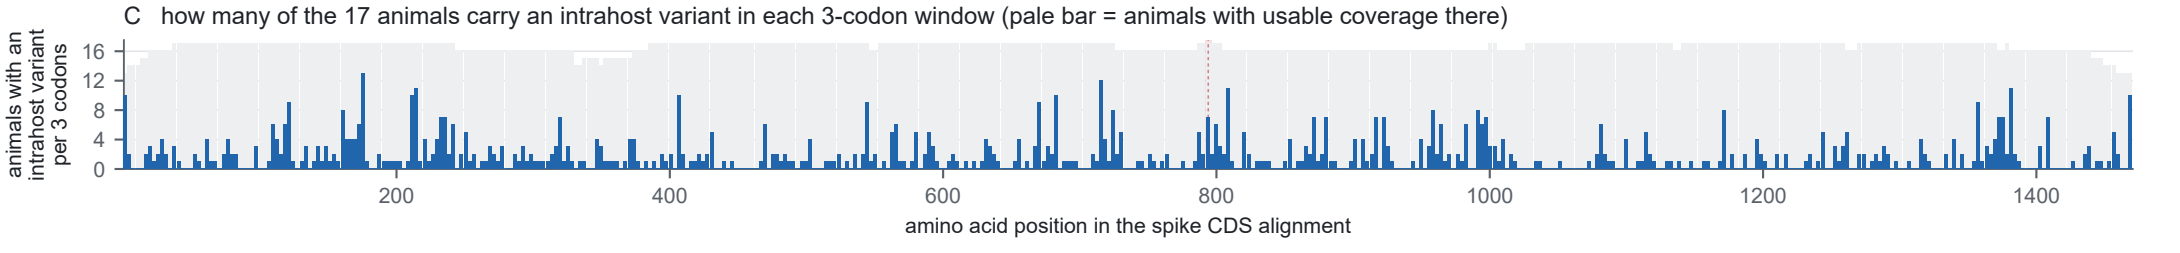

A intrahost frequency of every position, computed separately within each animal — each point is one position in one animal

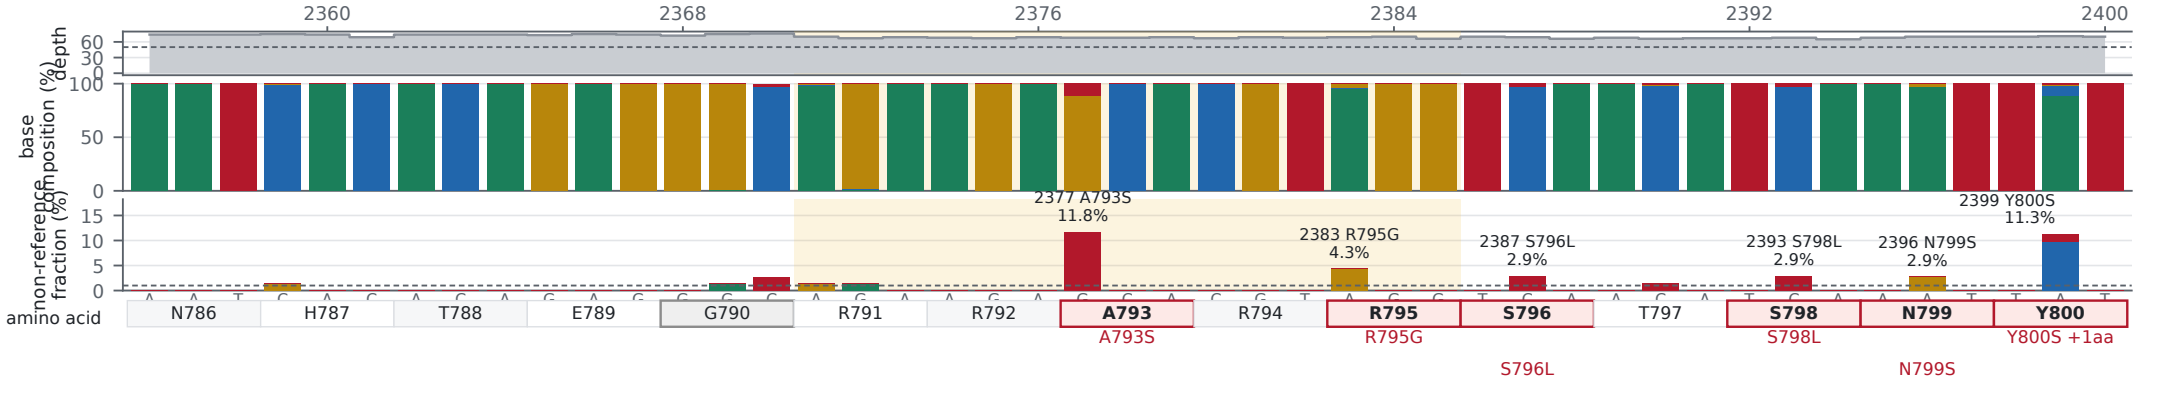

B per-base composition at the spike site most strongly associated with the FECV/FIPV biotype
fecv50

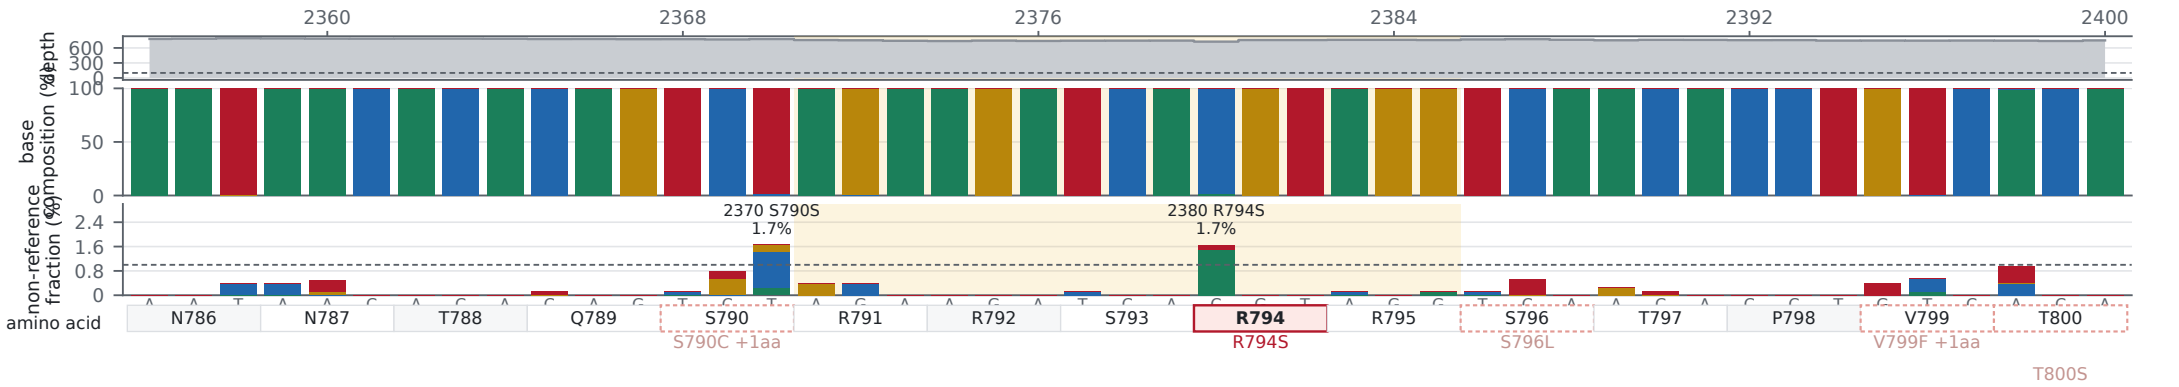

C how many of the 17 animals carry an intrahost variant in each 3-codon window (pale bar = animals with usable coverage there)

D per-base composition around the S1/S2 cleavage site in individual animals
FECV_NARC4

E fecv16

F fecv30
